DETAILED ACTION

Election/Restrictions

1. Applicant is required under 35 U.S.C. 121 to elect a single disclosed species, even though this requirement is traversed.

The species/embodiments are as follows:

Species/Embodiment 1: Figure 3
Species/Embodiment 2: Figure 4
Species/Embodiment 3: Figure 5
Species/Embodiment 4: Figure 6-7

It appears that claim 1-10 fall into particular embodiment, whereas claims 11-20 may be grouped together as relating to another embodiment(s).

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the invention unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

application status information, as well as to general patent information publicly available.

EFS allows customers to electronically file patent application documents securely via the Internet.

EFS is a system for submitting new utility patent applications and pre-grant publication submissions in electronic publication-ready form. EFS includes software to help customers prepare submissions in extensible Markup Language (XML) format and to assemble the various parts of the application as an electronic submission package. EFS also allows the submission of Computer Readable Format (CRF) sequence listings for pending biotechnology patent applications, which were filed in paper form.
